

Invalid Redefinition

Abbreviation

InvRdf

Description

This validation rule checks if a property redefines the inherited property of the owner classifier.

Severity

Error

Constrained Element

Property, Operation

Solvers

- **Remove Element** - removes the invalid redefining property from the model.

Example

The property *parts* is both owned by and redefined via the element *Car*, resulting in the redefining property *parts1*, which triggers the validation error. Resolving the error via the Remove Element solver removes the redefining property *parts1* from the model.
