Diagram name and its context name synchronization

The diagram name and its context name are synchronized automatically.

🕯 ate an Activity diagram. Type a name for the Activity diagram, for example, Receive. The name of the Activity automatically changes to Receive.

And conversely - change the name of the Activity and the Activity diagram name will be changed automatically. This is synchronization of a diagram

name and its context name:

To turn off the synchronization

Synchronization works in the following cases:

- In the Environment options dialog, General > Editing options group, cancel the selection of the Synchronize the diagram name with its

 Activity and Activity diagram inside.
 contextname option.
 - Interaction and Communication or Sequence diagram inside.
