

Inconsistent Data Markings (Incompatible Tag)

Abbreviation

IDB

Description

The validation rule checks if the added Data Markings are specified as incompatible with any of the other added Data Markings via their "incompatible" tags.

Severity

warning

Constrained Element

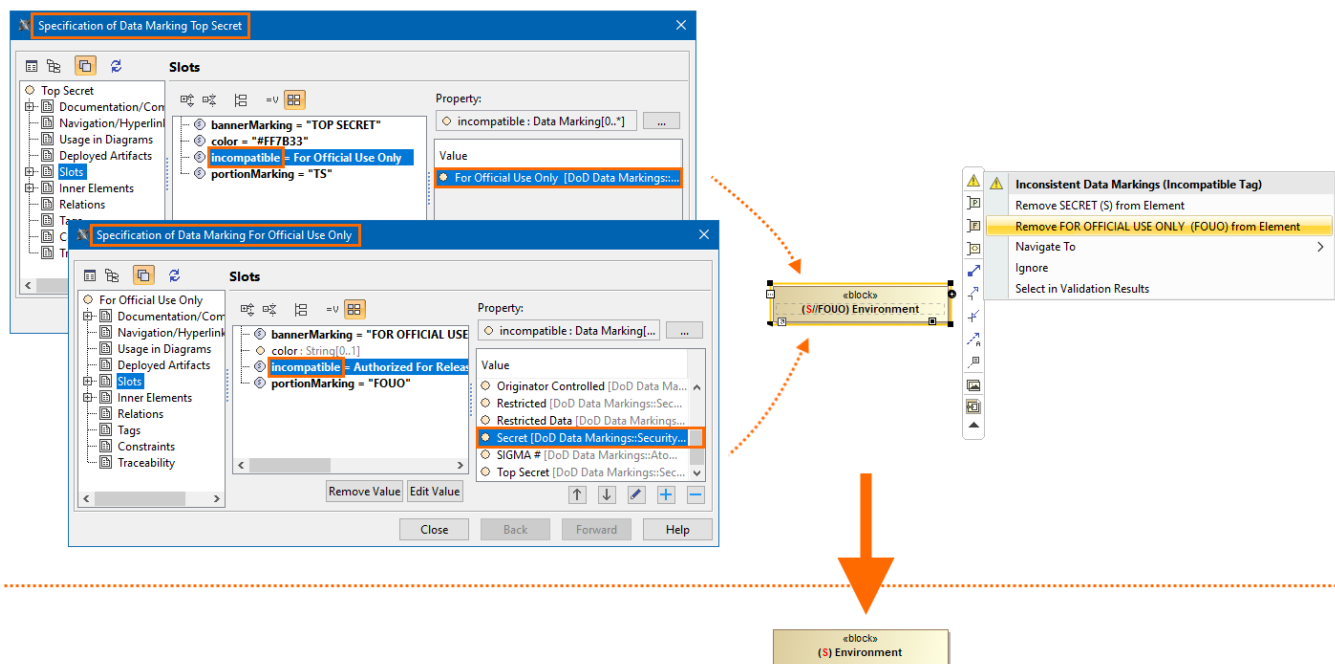

Element

Solvers

- **Remove <Data Marking> from Element** - once selected, you can choose which one of the added Data Markings to remove from the element.

 <Data Marking> - represents the full Data Marking name and portion marking in parentheses, e.g. "Remove Top Secret (TS) from Element".

Example

The element has both Secret (S) and For Official Use Only (FOUO) Data Markings added, both of which are specified as incompatible via their "incompatible" tags.

The error is resolved by removing the FOUO Data Marking from the element via the **Remove from Element** solver.
