Showing an annotation in the Documentation pane

There are several ways to make an annotation for a class or a property appears in the Documentation pane any time you click the annotation in the Containment tree or in the diagram pane.

To show an annotation for a class in the Documentation pane when you click the class

1. Drag the annotation (either on the diagram or in the Containment tree) to the class. (This makes it owned by the class.)

2. Click the class. The annotation will show up in the **Documentation** pane.

The annotation owned by the class shows in the Documentation pane.

To make an annotation for a property appear in the Documentation pane when you click the property

1. Double-click an annotation in the Containment tree to open its Specification dialog.

2. In the Specification dialog, click an next to Annotated Element. The Select Elements dialog will open.

5. Click Close to close the Specification dialog.

A Note

• If you drag more than one annotation to a class or a property, only the first created annotation will appear in the Documentation pane and in

the class' Specification window (under the Documentation/Hyperlink property).

- An annotation for a property will appear in the **Documentation** pane only if its annotated element is set to the property and its preferred Usage annotation property tagged value is specified or updated.
 - In this current release, only annotations that have been adjusted to show in the **Documentation** pane will appear in the Natural Language Glossary.
