Magic Cyber Systems Engineer Documentation

This is the home page of Magic Cyber Systems Engineer documentation.

Magic Cyber Systems Engineer is based on the award-winning MagicDraw modeling platform. The solution retains all the best diagramming, collaboration, persistence, and documentation capabilities while offering more customized capabilities tailored to **systems engineering** needs.

The documentation of Magic Cyber Systems Engineer is a package that includes the documentation of these capabilities:

General capabilities

Introduces the main features of modeling tool: working with projects, UML 2 modeling and diagramming, collaboration capabilities, and many more core features.

SysML modeling

Provides descriptions of SysML diagrams and elements, plus introduces SysML specific features as well as gives guidelines for building systems.

Requirements modeling

Guides you through the import, export, and management of SysML requirements.

Installation and licensing

Provides the instructions about how to insta
