Using installer file

On this page

• Post-Installation configuration

Here you can learn how to start Magic Collaboration Studio using the installer file. During installation, you can choose one of the following installation options:

- Quick Install intended for simple collaboration scenarios where web-based collaboration is not a daily activity. It will install Magic Collaboration Studio and all its web applications into a single machine.
- Advanced Install intended for heavy-weight production use. It will allow you to choose what components to install: Teamwork Cloud Server and /or Web Application Platform (with all of the available web applications). This installation option should be used when Teamwork Cloud Server is deployed on a separate machine from Web Application Platform.

Before installing Magic Collaboration Studio, do the following:

🕼 e Installation path contains any of the special characters, like [[', ']', '(', ')', '!', '@', '#', '\$', '#', '%', '{', '}, '+', '=', or ';', the installation procedure cannot be

completed successfully and the login page will not load. For example, if the installation path is C:\Program Files\TeamworkGloud, which does no

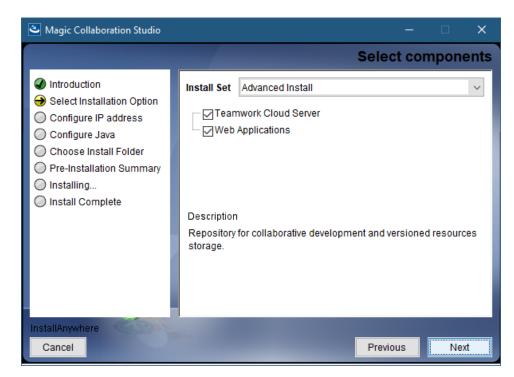

contain almost littles bleethis and erse the in because Magic Collaboration Studio uses the floating license.

To install Magic Collaboration Studio by using the installer file

- 1. Right-click the *magic_collaboration_studio_<version_number>_installer_win64.exe* file and select **Run as administrator**.
- 2. When the installation wizard opens, click Next.

- 9. Check the pre-installation summary and click Install.
- 10. Upon successful installation, click Done to close the installation window.
- 11. Open the Task Manager and start the following services:
 - TeamworkCloud service
 - WebApp service

Zookeeper service starts automatically when starting the WebApp service.

12. Check if the system is working. You should be able to access Magic Collaboration Studio via https://FQDN:8443/webapp/.

Post-Installation configuration

the installer has now created the preliminary configuration. If your system is still not operational and you cannot use Magic Collaboration Studio, check

the configuration parameters as described below.

- Edit the configuration file: C:\Program Files\MagicCollaborationStudio\configuration\application.conf. Search for seeds = , located under the section for the persistence Cassandra section, and replace: localhost with: ip_address_of_cassandra_node. Search for url =, located in the esi. auth section. Enter the IP address or FQDN (if accessing via FQDN) of your server.
- 2. If you are accessing TWCloud Admin via its FQDN, edit the configuration file: C:
- VProgram FilesWagicCollaborationStudioVauthServer\config\authserver.properties. Search for server.public.host and replace the IP address with the FQDN. Search for authentication.redirect.uri.whitelist, and append the following to the entry, https://FQDN:8443/webapp/
- Please create a an entry in C:\Windows\System32\drivers\etc\hosts containing the local IP address and the FQDN of your machine, if accessing via FQDN. For example, if your IP address is 10.1.1.123 and your FQDN is mymachine.mydomain.local, it would be in this form: 10.1.1.123 mymachine.mydomain.local
- 4. Open an administrative command prompt and issue the following commands in order to create service dependencies:
 - sc config authserver depend= teamworkcloud
 - sc config webapp depend= teamworkcloud
- 5. Open the Task Manager and restart the authserver, teamworkcloud, and webapp services.
- 6. In your web browser, go to https://localhost:8443/webapp (if default options are used) to open Magic Collaboration Studio.
