Working with Services Connectivity matrix

The Services Connectivity Matrix (Sv-Cn) show how services interact with each other. It is an editable matrix where cells represent Service Exchanges and the headers represent Services.

To create a Services Connectivity Matrix

1. Specify **Row Scope** (Services);
2. Specify **Column Scope** (Services);
3. Click ⟳ .

To add new Service Exchange

1. Double-click (or right-click) an empty intersection. The **Add New Service Exchange** button appears.
2. Click the **Add New Service Exchange** button. The **Realized Service Exchange** wizard opens.
3. Follow the steps of the wizard.
4. Click **Finish**.

To remove the exchange

1. Double-click a full intersection between the desired elements.
