Working with OV-4 diagram

To create an OV-4 diagram

1. Create Organizations and Posts.
2. Display the generalizations (general-specific relationships) and compositions (whole-part relationships) between them.
3. Create Actual Organizations and Actual Posts.
4. Relate Actual Organizational resources with Actual Resource Relationship.

You can also display Competencies of the Organizational Resources.

You can use the Commands relationship to display the Operational Resource that is in charge of others.

You can display Persons and Actual Persons in an OV-4. Actual Persons can fill in Actual Posts. You can display this relationship using the Fills Post dependency.

Organizations Resources are the resources and in general they could be modeled just before SV-1 view.
