

Creating NSV-2 diagram

It is recommended to complete a NSV-1 before creating NSV-2.

To create a NSV-2 diagram

1. Create or reuse Resources created in NSV-1.
2. Associate Resources using Resource interfaces.
3. Create Resource Ports.
4. Specify the types for the Resource Ports.

NSV-2 product allows to show the provided and required services by particular Resources. You can model the structure of each Resource by using the **System Internal Communications Description** diagram or in a special structure compartment of this element shape.
