

Settings application

In **Settings** application a user can set all required server configurations, for example: to enable a secure connection to Teamwork Cloud (TWCloud), you must enable TLS (Transport Layer Security) on the TWAdmin's **Settings** application. In this application external LDAP servers also can be managed. **Settings** application functionality:

- [Enabling secure connection between client and server](#)
- [Enabling external user creation](#)
- [Viewing server status](#)
- [Connecting to LDAP server](#)
- [Managing data markings in TWCloud Admin](#)
