

2022x Version News

Magic Collaboration Studio

Released on: July 1, 2022

The new release of Magic Collaboration Studio includes fresh and exciting features, such as newly introduced data markings and powerful reporting capabilities. Together with other usability changes, these new features allow for easier installation, more powerful access control, and better insights into what's happening with your data.

In version 2022x, the Collaborator application brings a number of new functionalities as well. We have introduced several document contextualization improvements, such as automatic image numbering and a quicker way to reorder newly created paragraphs. In addition, you will be able to navigate large tables a lot easier due to multiple table usability enhancements, embed diagrams from Collaborator documents into web pages and documents, and monitor long-running tasks with the help of the task manager.

Data Markings

In addition to the Role-Based Access Control (RBAC) mechanism, you can now apply even stricter access rules using [Data markings](#). This feature allows you to mark resources, categories, users, and user groups with custom-defined hierarchical access levels. You can employ these levels as additional security layers when listing or accessing resources on the server. After enabling data markings in the **Settings** app, you can set the clearance levels of users and user groups in the **Users** app and set the classification levels of resources and categories in the **Resources** app. This allows you to restrict access to certain resources, categories, users, and user groups.

Document Contextualization Enhancements

We are happy to announce that Cameo Collaborator for Teamwork Cloud 2022x brings several improvements to [document contextualization features](#) we introduced in previous versions:

- When you add images to a Cameo Collaborator document, they are automatically numbered and an image caption is created based on the file name to make your document more presentable. In Addition, you can modify the image number and caption at any time.

The screenshot displays the Cameo Collaborator interface for a document titled "Climate Control System". The main content area shows a technical diagram of a refrigeration cycle with components labeled: Compressor, Expansion valve, Evaporator and blower, Condenser and fan, and Drier. A legend indicates four types of refrigerant flow: High pressure side, gas (red); High pressure side, liquid (yellow); Low pressure side, liquid (dark blue); and Low pressure side, gas (light blue). Below the diagram is the caption "Fig. 1 How cool air is produced".

An "Add image" dialog box is open on the right side of the screen. It contains the following fields and options:

- Image title:** "How cool air is produced"
- Image number:** "1"
- Image preview:** A smaller version of the diagram shown in the main content area.
- Action:** "Drag and drop or click to replace"

An orange arrow points from the "Add image" dialog box to the diagram in the main content area, indicating the process of adding or replacing an image.

Auto-numbering images added to a Cameo Collaborator document.

- Now you can quickly reorder newly created paragraphs and images in a section by cutting and pasting them to a new location.

Step 4: The liquid is then pumped through an orifice tube which takes the refrigerant from high pressure to low pressure, changing its state into a cold gas.

Step 5: The cold refrigerant in its gas state then flows through an evaporator. The evaporator then works as a cross-flow heat exchanger, cooling air that is passed through the heat exchanger fins by an A/C fan and finally blown through and into the cabin

Create paragraph Add image Cut 1 Cut a paragraph or an image

The diagram illustrates the refrigeration cycle of a car's air conditioning system. It shows four main components connected in a loop: a Compressor at the top left, a Condenser and fan at the bottom left, an Expansion valve at the top right, and an Evaporator and blower at the bottom right. A Drier is located in the middle of the loop between the condenser and the expansion valve. Arrows indicate the clockwise flow of the refrigerant. A legend on the right side of the diagram identifies the four states of the refrigerant by color: red for high pressure gas, yellow for high pressure liquid, dark blue for low pressure liquid, and light blue for low pressure gas. The condenser is shown with a fan blowing air over its coils, and the evaporator is shown with a blower pushing air through its coils.

[Back to top](#)

If once in a while you find yourself getting frustrated when trying to read a large table in a Cameo Collaborator document, we have some very good news. Cameo Collaborator for Teamwork Cloud 2022x comes with significant user experience improvements when it comes to navigating tables:

Automotive FMEA

#	Id	Name	Classification	Item	Subsystem	Failure Mode	Local Effect Of Failure	Final Effect Of Failure	SEV	Cause Of Failure
3	F-3	F3	mechanical	light : Light	lighting : Lighting	Light does not turn on	Car inoperable at night	Car inoperable under bad weather conditions	3	Broken w
4	F-4	F4	electrical	light : Light	lighting : Lighting	Light does not turn off	Car won't start	Short circ	3	
5	F-5	F5	mechanical	light : Light	lighting : Lighting	Light does not turn on	Car inoperable at night	Car inoperable under bad weather conditions	3	Headlight
6	F-6	F6	electrical	light : Light	lighting : Lighting	Light does not	Car won't start	Operator	2	

Embedding Dynamic Diagrams

Cameo Collaborator for Teamwork Cloud introduces a new exciting functionality allowing you to embed diagrams from Cameo Collaborator into web pages or documents. When copying a diagram link, you can select to get the URL designed to create an inline frame and easily embed it into any content supporting the iFrame component. Furthermore, such a URL is dynamic and always displays the latest version of an embedded diagram even after a Cameo Collaborator document is updated.

Embedding a diagram from Cameo Collaborator into a Confluence page.

Task Manager

The new version of Cameo Collaborator for Teamwork Cloud has a Task Manager which you can use to monitor the status of long-running tasks, such as exporting documents to PDF or HTML. It will definitely come in handy when you need to manage several document exports at once as shown in the figure below.
