Installation on Linux using scripts

This chapter explains how to install and configure Magic Collaboration Studio on Linux when it is deployed on a single server. It also provides the configuration for installing the Magic Collaboration Studio node and the underlying Cassandra node on the same server.
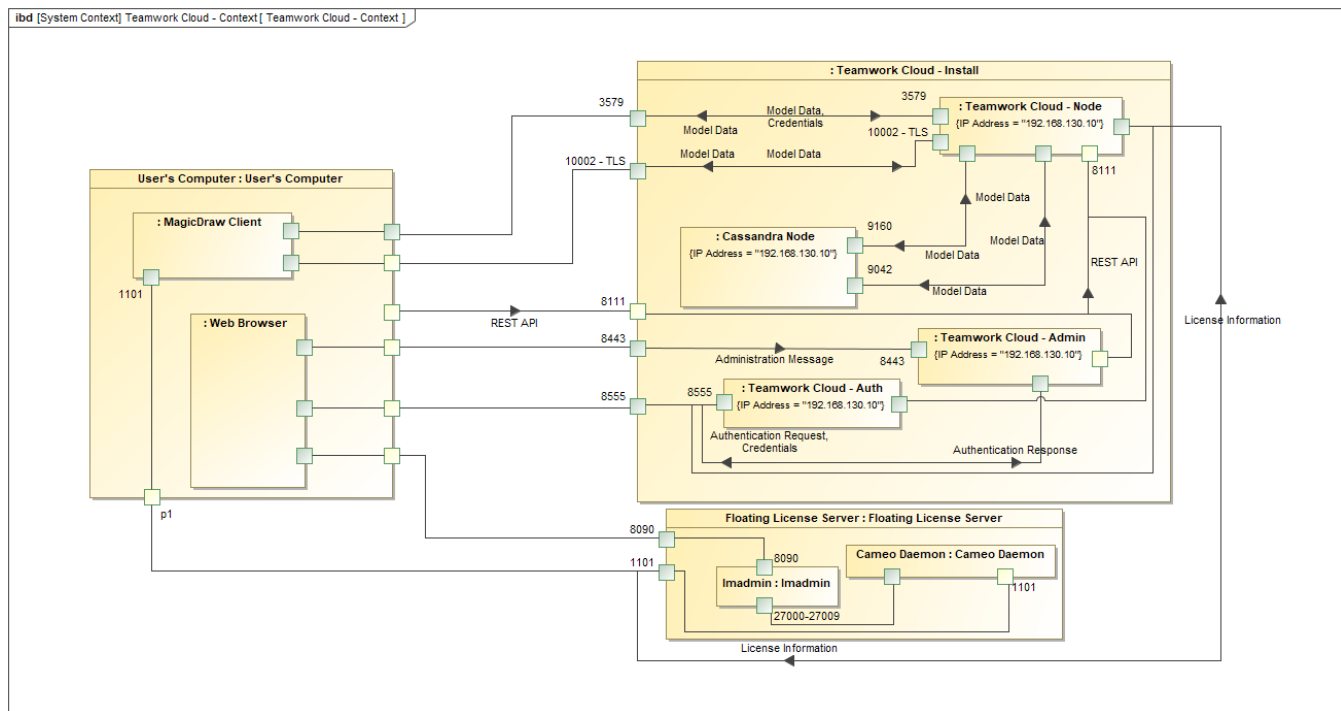

> ⚠️ **Prerequisites**
> Before installing Magic Collaboration Studio, do the following:
>
> - Make sure that your hardware and software meet the recommended system requirements and prepare the operating system for installation.
>
> - Download and extract the *MCS_2022x_install_scripts.zip* file. It contains the scripts you will need for the installation.

To install and configure a working instance of Magic Collaboration Studio, perform the following steps:

1. Install the FlexNet license server.
2. Install Apache Cassandra. (For the Cassandra version, see Software requirements.)
3. Install Magic Collaboration Studio services.

Teamwork Cloud installation and configuration on Centos 7.x on a single server.
